FOR GENERATIONS**

FASTER SETTING

SOLID DHALAI **MAZBOOT GHAR**

PREVENTS RUSTING

DURABLE STRUCTURES FOR GENERATIONS

FASTER SETTING

STAR DHALAI MASTER FEATURES

FASTER SETTING

Accelerated hydration vide addition of the additive, imparts a faster setting and rate of strength gaining in concrete.

HIGH COMPRESSIVE STRENGTH

Higher 1 day, 3 days and 7 days strength in cement helps concrete to attain more strength in early days, due to which de-shuttering and other associated works can be done faster. Overall reduces the total time of construction.

REDUCES SEEPAGE

Optimum fineness with a proper particle size distribution ensures fuller hydration process, thereby more generation of CSH gel and denser concrete; which leaves lesser voids for water to percolate inside concrete ensuring 'Seepage Reduction'.

DURABLE STRUCTURES FOR GENERATIONS

Low alkalis, low chloride, higher fineness & special additive imparts durability and longevity in concrete structures.

IMPROVED PSD

With state-of-the art technology Improved Particle Size Distribution in Cement leads to impermeable concrete.

PREVENTS RUSTING

This makes the concrete denser & prevents the reinforcements from Rusting making the Dhalai Stronger.
